

STANDARD OPERATING PROCEDURE • V1.0

How to run the shop app, step by step

A visual guide for daily operators. Follow the numbered rails and flowcharts. Money rules that matter — cashback, cash discount, gift cards and card due dates — are shown as diagrams so they're easy to remember.

Who can do what

There are two roles. Workers create freely, but any change to an existing record goes to the Owner first.

Owner (Admin)

- Sees every screen
- Create / edit / delete instantly
- Users, cards, settings, reports
- Approves worker requests

Edits apply immediately (no undo)

Worker

- Store, Purchases, Sales, Cash Book, Gift Cards
- Create new records freely
- Edit / delete → needs approval

Owner grants screens in Settings

Logging in

1

Open the app link

Use the same browser each day so the session is remembered.

2

Enter phone / username + PIN

Keep your PIN private. The Owner can reset it in Settings → Users.

3

Tap Sign in

Log out from the top-right when you finish on a shared device.

● **Check the bottom of the screen.** If a red “Offline” bar shows, you can view data but **cannot save** until you reconnect.

The daily routine

✓ **Owner, end of day:** review **Daily Summary**, clear **Approvals**, and check **Credit Cards** for anything due soon.

Record a purchase (stock in)

1

Purchases → New Product Purchase

Set the date and supplier (e.g. Carrefour).

2

Add product lines

Product, quantity and cost. Add as many as you bought.

3

Add payment lines

Split across **Cash**, **Credit Card** and **Gift Card** in any mix. Each card/gift line shows the balance available.

4

Check totals → Save

Any unpaid amount becomes supplier credit, collected later in **Payments**.

A **gift card** line can't exceed its balance. A **credit card** line earns cashback (see below). A **cash** line can carry a discount % (see below).

Raise a sales bill (stock out)

1

Sales → + New Sale Bill

Customer name (or "Walk-in"), phone/address optional.

2

Add items

Product, quantity, sell rate. Stock is checked — you cannot oversell.

3

VAT mode & payment method

Cash / Card / Bank / Cheque. Cash offers an optional discount %.

4

Amount received → Save (or Save & Print)

Less than total = credit sale; the balance is tracked in Payments.

Gift cards — buy & use

A gift card is bought like a product: its face value becomes its balance, and you spend it down on purchases.

- 1 Purchases →  New Gift Card Purchase**
Store, name, and the **card number (last 4 required)**.
- 2 Amount loaded + pay for it**
Pay with the same split as a purchase — cash and/or a credit card (card still earns cashback).
- 3 Use it as payment**
Pick it on a purchase; the balance drops and the spend is kept in its history.

Gift cards are **not** offered as a customer-sales payment method.

% Cashback is not instant

Card cashback (e.g. Carrefour on a credit card) is **not** given at the till. It is calculated and credited in the statement cycle. The app shows it as “pending” until then.

See a card's pending cashback and credit date in **Card Preference** and on the card's detail screen.

★ **Card Preference** tells you the best card to use next — ranked by cashback earned *and* whether it has enough balance and monthly cap left.

Card payment due date

Each card computes its due date one of two ways (set when adding/editing the card):

Fixed payment day

Due on the same day every month (e.g. the 15th).

From statement date

Due = **Statement Day + grace days**.
Example: day 5 + 25 days → due on the 30th (UAE style).

The edit screen previews the exact next due date as you type.

Cash discount %

On a **cash** line (purchases and sales) you can enter a discount %. The bill is settled in full, but only the discounted cash actually moves.

Bill settled = 1,000 · cash that moves = 940 · saving = 60.

Edits & deletes — the approval flow

Activity Log — what history is kept

Every **edit** and **delete** is recorded in the **Activity Log** (Owner-only, under Management) — including the Owner's own changes.

CHANGE	RECORDED?	WHERE / DETAIL
Any edit or delete (Owner or Worker)	Yes	Activity Log: when, who, action, record type, reference, and a short summary (e.g. old → new total).
Approved worker edit/delete	Yes	Logged against the requester , tagged “approved by Owner”. Also in the Approvals list.
Card / gift balance fix	Yes	In the Activity Log and as an “EDITED” ledger entry.
Who created a record	Yes	Stored on the purchase/sale/ledger entry.

 The log is **permanent (append-only)** — no clear button. Filter by Edits/Deletes, search by user or reference, and export to Excel. It stores the change + a summary, not a full field-by-field snapshot, so keep periodic backups for exact prior figures.

Data & sync

- All devices update live. Each person's **cash wallet** is tracked separately.
- **Online is required to save.** Offline = view only.
- Back up regularly with **Settings** → **Export** and the report Excel exports.

Quick troubleshooting

SYMPTOM	DO THIS
"Offline" bar / can't save	Reconnect; if it says reload, reload the page.
Save button does nothing	Check the offline bar and fill all required (*) fields.
Card payment blocked	Card is over its limit and not set to allow over-limit — lower the amount or change the card.
Gift card missing from list	Its balance is zero (auto-inactive) or it's set Inactive.
Worker can't edit/delete	By design — the request goes to the Owner in Approvals.
Excel export "engine not loaded"	Connect to the internet once so it caches, then retry.

 start / key step  good outcome  blocked / caution  pending / saving
